Education

VIT Bhopal University

Bachelor of Technology in Computer Science and Engineering

Sehore, India

Aug. 2023 - May 2027

Navayuga Radiance Senior Secondary School

Senior Secondary School (CBSE)

Lucknow, India

Apr. 2022 - May 2023

Lucknow Public School and Colleges

Secondary School (ICSE)

Lucknow, India

Apr. 2020 - May 2021

Relevant Coursework

Data Structures and Algorithms, Computer Networks, Database Management Systems, Operating Systems.

Projects

Mutual Funds Tracking App | [Link](#)

[Kotlin, Compose, Room DB]

- Developed an Android application using Kotlin and Jetpack Compose with MVVM architecture, integrating RESTful APIs (MFAPI) via Retrofit to fetch, paginate, and display real-time mutual fund NAV data across 4 curated fund categories.
- Implemented offline-first architecture using Room Database with DAO pattern and many-to-many entity relationships, enabling persistent watchlist management and fund data caching guaranteeing continuous access to financial data regardless of network connectivity.
- Engineered scalable UI/UX features including debounced live search, Jetpack Paging 3 for efficient list rendering, shimmer loading animations, and interactive NAV history charts using the Vico library in Compose.
- Designed a clean layered architecture with Repository pattern, KSP-powered code generation, and a manual dependency injection container, ensuring separation of concerns across data, domain, and presentation layers.

Personal Finance Tracker App | [Link](#)

[Kotlin, Compose, Room DB]

- Architected an offline-first app using Kotlin, MVVM, and Dependency Injection, ensuring a modular, highly testable codebase with clear separation of concerns.
- Engineered a reactive UI entirely in Jetpack Compose, utilizing unidirectional data flow and state hoisting to eliminate inconsistencies and optimize rendering performance.
- Implemented robust local storage using Room (SQLite) for complex transactional data processing.

Project Synapse | [Link](#)

[Python, LangChain, Java]

- Engineered an AI-driven last-mile delivery disruption agent reducing operational costs by minimizing customer support interventions through automated scenario handling with 98% prediction accuracy across 6+ unique cases.
- Built a native Android application in Java leveraging Android SDK internals, multi-activity, lifecycle management, Intent-based IPC, and thread-safe background processing enabling real-time dual-user flows for customers and delivery partners within a single APK.

Extracurricular Activities

Open Source Contributor – OneBusAway (Open Transit Software Foundation) | [Link](#)

- Identified issues and proposed 10+ [bug fixes](#) on their GitHub repository.
- Fixed UI accessibility by increasing touch target sizes to a minimum of 48dp and improved contrast of widgets.

Achieved Knight Badge on LeetCode (1900+ rating) with 500+ problems solved.

Technical Skills

Languages: Java, Kotlin, Go

Android: Android SDK, Jetpack Compose, MVVM, Coroutines, StateFlow/Flow, Retrofit, Room DB, Lottie

Backend & Database: REST APIs, MySQL, PostgreSQL, SQLite, AWS

Tools & Frameworks: Go Fiber, Git
